

## 1. Click <http://localhost:8088/druidclustermodelview/add>

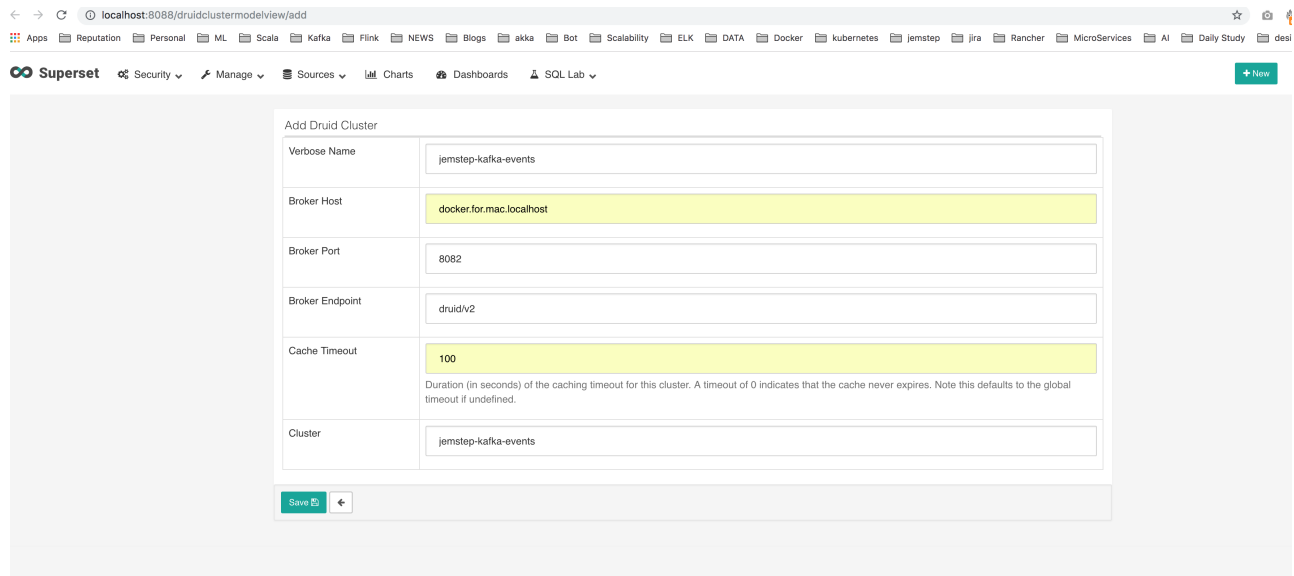

The screenshot shows the Superset web interface at the URL `localhost:8088/druidclustermodelview/add`. The page title is "Add Druid Cluster". The form contains the following fields:

- Verbose Name:** A text input field with the placeholder text "Verbose Name".
- Broker Host:** A text input field with the placeholder text "Broker Host".
- Broker Port:** A text input field containing the value "8082".
- Broker Endpoint:** A text input field containing the value "druid/v2".
- Cache Timeout:** A text input field with the placeholder text "Cache Timeout". Below the field is a note: "Duration (in seconds) of the caching timeout for this cluster. A timeout of 0 indicates that the cache never expires. Note this defaults to the global timeout if undefined."
- Cluster:** A text input field with the placeholder text "Cluster".

At the bottom left of the form is a green "Save" button with a right-pointing arrow. At the bottom right is a back arrow button.

## 2. Fill with details

The screenshot shows the same Superset "Add Druid Cluster" form, but now with the following details filled in:

- Verbose Name:** "jemstep-kafka-events"
- Broker Host:** "docker.for.mac.localhost" (highlighted in yellow)
- Broker Port:** "8082"
- Broker Endpoint:** "druid/v2"
- Cache Timeout:** "100" (highlighted in yellow). The note below the field remains the same.
- Cluster:** "jemstep-kafka-events"

The "Save" button and back arrow are still present at the bottom.

## 3. Save and Click On added name.
